All-in-one coin processing

The CC-200 counts 2000 coins per minute with continuous count for verification purposes, programmable bag stops for bagged coin output or batch settings to produce coin rolls.

Portable design

With its compact design and folding hinged coin tray, the CC-200 fits easily into any coin processing environment. The handle allows added mobility, meaning increased versatility and easy storage.

Operator friendly

Ease of use with little training required makes the CC-200 an operator's dream. A robust but compact design and easy programming and maintenance add to its overall efficiency.

Flexible features

In addition to counting coin into bags, the CC-200 can package coins by denomination into tubes. It can also count out a denomination and package it within a mixed batch of coins. The selected denomination is batched or packaged while the smaller coins are filtered into the off-sort slot.
